

PUFC

PLAYER HEALTH & SAFETY

Player safety should be first and foremost in every coach and volunteer's mind. Below are a few resources for coaches, players and parents to reference to better promote proper health and safety for all participants.

Severe Weather & Lightning Policy Air Quality Guidelines:

Coaches and Managers,

Given the recent air quality challenges in the Lower Mainland PUFC recommends coaches and teams follow the guidelines (set forth below) when deciding to run outdoor activities with your teams. This policy will be significant during spring/summer play.

References:

- Environment Canada Webpage (https://weather.gc.ca/airquality/pages/bcaq-007_e.html)
- BC Soccer Air Quality Guidelines (<https://www.bcsoccer.net/files/MemberService/BestPracticeGuides/Air%20Quality%20Guideline%20BC%20Soccer%20Updated.pdf>)

Game Protocols

- PUFC will cancel games when the AQHI is expected to be at 6 or higher.
- Any games played when the AQHI is 4 or 5 should see more regular stoppages to allow the players additional rest times and hydration (similar to what we do during hot weather).
- A decision will be made at noon each day as to whether all games are cancelled and team officials will be notified by email.

Given how poor air quality affects the younger population more significantly, we will err on the side of caution. If games are cancelled, they will not be made up as the season is too short to reschedule.

Training Protocols

- PUFC recommends that all outdoor training be cancelled if the AQHI index is expected to be 6 or higher.
- Coaches may follow the guidelines presented by BC Soccer for training outdoors but it is at their discretion as to how they will modify their training load/intensity to best support the players when the AQHI is a 4 to 5.
- Coaches are encouraged to communicate this protocol to their team prior to any training session taking place.

CSA Severe Weather Policy (PDF)

The safety of players, coaches, management and spectators is the primary concern in any weather event that occurs during all matches sanctioned by the CSA. By understanding and following the below information, the safety of everyone shall be greatly increased. Ultimately the referee has the final say over delaying or restarting a match due to weather. Waiting to stop play or not waiting to start play may result in a serious injury or loss of life. Referees are expected to act responsibly when dealing with such events during matches they are controlling.

When a lightning is detected, you can determine the distance of lightning in your area by counting the number of seconds between the flash and the first sound of the thunder and dividing by five(5). This will give you the distance in miles from your location. Remember, if you are in a higher elevation, the lightning can come upon you much quicker and your reaction time is greatly hindered.

30/30 RULE

When you see lighting, count the time until you hear thunder. If this time is thirty (30) seconds or less, seek proper shelter. Wait thirty (30) minutes or more after hearing the last thunder before leaving the shelter. If you can not see the lighting, just hearing the thunder is good back up rule.

Additional Information

Please note the following recommendations from Environment Canada: The existence of blue sky and absence of rain are not protection from lighting. Lighting can and does strike as far as ten (10) miles away from the rain shaft. It does not have to be raining for lighting to strike. Many lighting casualties occur in the beginning, as the storm approaches, because many people ignore initial precursors of high winds, some rainfall and cloud cover. Generally, the lightning threat diminishes with time after the last sound of thunder, but may persist for more than thirty (30) minutes.

Lightning can strike ahead of the parent cloud – take action even if the thunderstorm is not overhead.

Be aware of how close lightning is occurring. The flash-to-bang method is the easiest and most convenient way to estimate how far away lightning is occurring. Thunder always accompanies lightning, even though its audible range can be diminished due to background noise in the immediate environment and its distance from the observer.

PACIFIC UNITED FC

Lightning awareness should be increased with the first flash of lightning or the first clap of thunder, no matter how far away. This activity must be treated as a wake-up call to all. The most important aspect to monitor is how far away the lightning is occurring, and how fast the storm is approaching, relative to the distance of a safe shelter. Recognize that personal observation of lightning may not be sufficient. Additional weather information may be required to ensure consistency, accuracy and adequate advance warning.

When larger groups are involved, the time needed to properly evacuate an area increases. As time requirements change, the distance at which lightning is noted and considered a threat to move into the area must be increased. Extending the range used to determine threat potential also increases the chance that a localized cell or thunderstorm may not reach the area giving the impression of a “false alarm”.

Know where the closest “safe structure or location” is to the field or playing area and know how long it takes to get to that safe structure or location.

Safe structure or location is defined as:

Any building normally occupied or frequently used by people, i.e., a building with plumbing and/or electrical wiring that acts to electrically ground the structure. Avoid using shower facilities for safe shelter and do not use the showers or plumbing facilities during a thunderstorm.

In the absence of a sturdy, frequently inhabited building, any vehicle with a hard metal roof (not a convertible or golf cart) and rolled-up windows can provide a measure of safety. A vehicle is certainly better than remaining outdoors. It is not the rubber tires that make a vehicle a safe shelter, but the hard metal roof which dissipates the lightning strike around the vehicle. Do not touch the sides of any vehicle!

If no safe structure or location is within a reasonable distance, find a thick grove of small trees surrounded by taller trees or a dry ditch. Assume a crouched position on the ground with only the balls of the feet touching the ground, wrap your arms around your knees and lower your head. Minimize contact with the ground because lightning current often enters a victim through the ground rather than by a direct overhead strike. Minimize your body’s surface area and the ground! Do not lie flat! If unable to reach safe shelter, stay away from the tallest trees or objects such as light poles or flag poles), metal objects (such as fences or bleachers), individual trees, standing pools of water, and open fields. Avoid being the highest object in a field. Do not take shelter under a single, tall tree.

Avoid using the telephone, except in emergency situations. People have been struck by lightning while using a land-line telephone. A cellular phone or a portable remote phone is a

safe alternative to land-line phones, if the person and the antenna are located within a safe structure or location, and if all other precautions are followed.

When considering resumption of any athletics activity, it is recommended that everyone should ideally wait at least thirty (30) minutes after the last flash of lightning or sound of thunder before returning to the field.

People who have been struck by lightning do not carry an electrical charge. Therefore, cardiopulmonary resuscitation (CPR) is safe for the responder. If possible, an injured person should be moved to a safer location before starting CPR. Lightning-strike victims who show signs of cardiac or respiratory arrest need emergency help quickly. Prompt, aggressive CPR has been highly effective for the survival of victims of lightning strikes. For additional information the following website is helpful:

www.weatheroffice.gc.ca

Concussion Recognition

Concussions are one of the most overlooked issue in youth sports. If there is any suspicion of a concussion you should remove that player from activity or competition immediately.

Please see attached BC Soccer Concussion policy:

<https://www.bcsoccer.net/files/ArticleDocuments/Concussion%20Policy.pdf>

Return to Play Guidelines for concussions and other injuries

please see the attached BC Soccer Return to play policy that all PUFC members shall adhere to:

<https://www.bcsoccer.net/files/Coach/SoccerScience/Players%20Health-Head%20Injuries%20%20Concussions.pdf>

Muscle Cramping

the muscle cramping could be an issue for young athletes on and off the soccer pitch. Below is a resource that shall help with muscle cramps.

<https://www.healthlinkbc.ca/health-topics/za1086>

As always, please feel free to contact the PUFC office for further support and information.
